Informed Consent for Chiropractic Care

When a practice member seeks chiropractic health care, and we accept a practice member for such care, it is essential for both to be working for the same objective. It is important that each understand both the objective and the method that will be used to attain it. This will prevent any confusion or disappointment. You have the right, as a practice member, to be informed about the condition of your health and the recommended care and treatment to be provided so that you may make the decision whether or not to undergo chiropractic care after being advised of the known benefits, risks and alternatives.

Chiropractic is a science and art which concerns itself with the relationship between structure (primarily the spine) and function (primarily the nervous system) as that relationship may affect the restoration and preservation of health. Health is a state of optimal physical, mental and social well-being, not merely the absence of disease or infirmity.

One disturbance to the nervous system is called a vertebral subluxation. This occurs when one or more of the 24 vertebrae in the spinal column become misaligned and/or do not move properly. This causes alteration of nerve function and interference to the nervous system. This may result in pain and dysfunction or may be entirely asymptomatic. Other joints in the arms, legs, and jaw are also subject to these same changes. While other healing professions can provide exceptional supplemental and rehabilitative services, there is no alternative to the training a chiropractor receives in the specific detection and correction of subluxation. Choosing to not have these corrected may lead to progressive degeneration and dysfunction, worsening symptoms, increased pain, and increased need for medical interventions.

Subluxations are corrected by an adjustment. An adjustment is the specific application of forces to correct and/or reduce vertebral subluxation. Our chiropractic method of correction is by highly-specific manual adjustments of the spine and extremities. Adjustments are done by hand or instrument in this office.

If during the course of care, we encounter non-chiropractic or unusual findings, we will advise you of those findings and recommend that you seek the services of another health care provider.

As with anything in life, there is always some risk involved. Due to the nature of physics and the transfer of a force and the dynamic nature of the human body, there is a low risk of trauma-like injury such as bruising, soreness, sprain/strain, fracture, dislocation. Sometimes, in the healing process, symptoms can worsen before they begin to improve. Ascension Chiropractic team members are trained to recognize underlying conditions that may contribute to these events. Dr. Ryan Yocum has received specific technique training to greatly decrease the risk of these events occurring. Your health and well-being is our greatest priority.

All questions regarding the doctor's objective pertaining to my care in this office have been answered to my complete satisfaction. The benefits, risks and alternatives of chiropractic care have been explained to me to my satisfaction. I have read and fully understand the above statements and therefore accept chiropractic care on this basis.
